

Are your prescriptions helping your patients?

- 50% of the medications patients take are ineffective

Are you getting a desired outcome?

- Approximately 60% of patients with depression are not responsive to the first medication prescribed

Are your patients suffering side effects from prescription drugs?

- Adverse drug reactions are the fourth leading cause of death in America

Scion Lab Services Psychiatric Panel

Our psychiatric gene panel analyzes the genes that affect the bodies response to medications commonly prescribed to treat psychiatric disorders.

This test provides a report indicating which drugs will work, which may need a dose adjustment, and which drug may have an increased risk of adverse side effects — all individualized to your patient.

Medications on the Scion Lab Services Psychiatric Report
